

Hanisha Pulimaddi

Software Engineering

hani.pulimaddi@outlook.com | +61 451 619 712 | [LinkedIn](#) | [Portfolio](#)

Software engineering student with hands-on experience across full-stack development and data-driven decision systems, moving from ML/DL coursework into building and pitching a startup product. Shipped an LLM-based compliance pipeline with a geometric compliance engine, developed a risk-prediction model on 255K+ records, and ran 200+ professional outreach contacts with 10+ pitches from a startup accelerator residency. Looking for an internship where I can keep building end-to-end, in software, data, or product engineering.

KEY SKILLS

- **Technical Skills:** Python, Java, C, SQL, JavaScript, FastAPI, React, TypeScript, SQLAlchemy, JWT, Git.
- **Transferable Skills:** Communication, Teamwork, Leadership, Problem-Solving, Analytical Thinking, Adaptability

WORK

Technical Consultant

1-week engagement role with a Non-Profit Organisation

Lou's Place, Redfern, NSW | Sept 2026

- Engaged post-hackathon to build a referral tool for caseworkers at a women's crisis centre serving **818** women annually.
- Ran discovery with frontline caseworkers and traced their abandoned services directory to build a tool that addresses their pain points.
- Proposed a solution that cut running cost to under **\$2/month** through cost modelling that restructured the system.

Founder in Residence, Arrayah (Chapter 3 Residency)

Startup Accelerator Program Residency Cohort

Drummoyne, New South Wales | Apr 2026 - Jul 2026

- Worked in a **bullish** environment building an Automated Compliance Checker system for architects
- Delivered and iterated on **10+ pitches**, conducted outreach to **200+ professionals** via LinkedIn and email during R&D, resulting in **5+ interviews**, gathering testimonials that shaped product direction

UTS Library Student Guide

University of Technology Sydney | Feb 2026 - Present

- Shelved, restocked, and processed **200+** library items weekly, ensuring accurate organisation and **timely access** to requested materials
- Assisted **100+** new students during orientation with library services, campus resources, easing onboarding process
- Supported front-line library operations, working alongside Library Assistants and management staff, to ensure smooth daily library operations

PROJECTS

WayFind, Crisis Centre Referral Tool

Hack For Humanity Hackathon | Sep 2026

- Built a voice-debrief write-back loop (Web Speech API + Claude Haiku) that turns a 15-second post-call note into structured eligibility rules and provides useful data insights.
- Designed a voice write back loop in JavaScript on Base44, using the Web Speech API for transcription and the Claude API to parse a 15-second post-call debrief into eligibility rules, status flags and data corrections.

Automated Compliance Checker

Drummoyne, New South Wales | Apr 2026 - July 2026

- Built an end-to-end LLM-based compliance-checking pipeline and a geometric envelope engine (FastAPI backend + React/Leaflet frontend)
- Validated against 26 NSW Planning API verified addresses, resulting in 100% recall and precision on rule extraction
- Deployed the React/Leaflet frontend to Netlify, following standard CI/CD framework.

FridgelQ DLCNN System

Deep Learning and CNN Course | UTS | Feb 2026 - May 2026

- Built a full-stack smart fridge inventory app with a custom-trained YOLOv5 object detection model on a FastAPI backend with SQLAlchemy, SQLite, and JWT-based authentication
- Built confidence debugging **80+** integration bugs related to frontend network calls, backend database queries and authentication issues
- Practiced structured version control with **20+** incremental commits across feature branches, learning Git terminal workflows, keeping a traceable history that simplified debugging and rollbacks

Default Prediction ML System

Machine Learning Course | UTS | Sep 2025 - Jan 2026

- Built an ML pipeline on **255K+ loan records**, experimenting on **3 models**, validating results via 3-fold stratified CV, ROC-AUC, F1, and AUPRC.
- Tuned decision thresholds and calibration curves to convert model probabilities into actionable risk scores.
- Reframed a **65-70%** recall trade-off as a BNPL approve/decline cost decision between missed defaults and customer friction.

EDUCATION

University of Technology Sydney, NSW

Bachelor of Engineering (Honours), Software Engineering | Feb 2024 - Dec 2027

Sancta Maria International School, Telangana, India

ICE (A-Level & AS-Level), IGCSE | Jun 2015 - Apr 2023
